IAFep – Install and Forget embedded professional.

IAFep is built for professional installation on a large network with in excess of 50 cameras.

IAFep - Install and Forget is the largest in the range of NVR capable of up to 28TB of on server storage in a 2U format. 92% energy efficient as drives are put to sleep when full and only woken when the storage is required.

These high availability recorders for analogue cameras (through adapter), IP cameras including megapixel, ultra-pixel and 360 degree/panoramic cameras.

Requiring professional installation, the IAFe will provide status reports using SSL encryption to a suitable monitoring station every few seconds. This will give warnings of any aspect of the IAFe that may need an engineer to investigate and helps avoid the possibility that a system may be down when it is most needed.

A huge range of popular IP cameras can be used with the IAF, along with analogue cameras connected via IP convertors.

IAFe also has a range of tools that can be connected on a network. These include digital input output modules, audio modules and image output modules.

Advantages - Why IAFep?

IAFep is resilient and is designed to be linked to Initsys Merlin or the VerifiedStorage service. This monitors all functionality and maintains the system in optimum state and will alert you in the event of problems.

The Initsys IAF units are housed in cosmetically attractive 2u 19" rack-mountable casings and because they are small , a limited amount of space is required for their installation.

This unit is a professionally built, reliable, and fully prepared unit straight out of the box.

The IAFep features eight SAS/SATA 2.5"/3.5" hard drive bays and supports up to 28TB storage capacity.

Providing RAID6 data security.

Up to 92% power efficiency

Equipped with 1+1 redundant 770W 80 PLUS Gold power supplies, the IAFep saves users money on energy costs while maintaining strict environmental protection standards. The two power supplies also utilize a hot-swap design that allows work to continue even if one of them requires maintenance or replacement.

TECHNICAL SUPPORT

Azimuth provides round the clock support both online and over the phone should the need arise. A client's understanding of a product is important to us and because Azimuth strives to ensure installers have a thorough understanding of the software, the need for technical support is kept to a minimum.

ZERO DOWNTIME
Azimuth operates on a 24/7 basis without clogging a system with hours of unnecessary footage. A headless IAF system will sit quietly in a secure environment with little need for maintenance or attention from security personnel.

SOFTWARE
All pre-built systems come complete with Azimuth VMS system pre installed and licensed. For more details on Azimuth and its features please visit www.azimuthvms.com.
